# IL LOADBALANCER

# ENDUR NCE

Coming soor

# A next-gen ADC for a cloud-native world

Endurance is a pioneering new load balancer from Loadbalancer.org, built on modern OS architecture.

Its rich feature set and robust architecture incorporates advanced automation, API integration, and powerful security features to provide a comprehensive solution for managing application delivery across distributed environments.

# **Key features**

#### Modern interface

Make advanced configurations without having to go into the config files.

#### HA clustering

Endless scaling made possible with n+ passive clustering.

# Advanced role-based access controls

Fortify security with granular RBACs for more precise user permissions.

# GSLB configuration synching

Reduce complexity with GSLB configuration synching across global sites.

րել։

# Extensive system logging and reporting capabilities

Enhance visibility and insights with built-in plugins to streamline the process.

# **Template customization**

Streamline and easily scale processes with the default Template Library and Wizard.

### API

Comprehensive API access and integration.

# **Rolling updates**

Jump straight to the latest appliance update.

# Snapshotting

Create system-wide snapshots for peace of mind to return to at any point.

# Rollbacks

Quickly roll back your own changes with auditing and checkpoints.
